

Figure 1. Schematic representation of the experimental design. The first part of the study was a 2-week pretest. The second part was the main study, which was divided into two groups: the control group and the intervention group. The control group received a standard care package, while the intervention group received a standard care package plus a 12-week intervention. The intervention was designed to improve the patient's knowledge, skills, and attitudes regarding self-management of their condition. The intervention was delivered by a trained healthcare professional. The study was conducted in a hospital setting. The participants were recruited from the hospital's database. The study was approved by the local research ethics committee. The data were collected and analyzed using statistical software. The results of the study are presented in the following sections.

In the Matter of)
)
Baesler for Senate Committee) MUR 4897
and Michael Sullivan, as)
treasurer.)

CERTIFICATION

I, Mary W. Dove, Acting Secretary of the Federal Election Commission, do hereby certify that on July 22, 1999 the Commission decided by a vote of 6-0 to take the following actions in MUR 4897:

1. Accept the conciliation agreement with Baesler for Senate Committee and Michael Sullivan, as treasurer, as recommended in the General Counsel's Report dated July 16, 1999.
2. Approve the appropriate letter, as recommended in the General Counsel's Report dated July 16, 1999.
3. Close the file.
